I. Global indicator

<Type 4>

<b>Indicator</b>	Number of people who died or disappeared in the process of migration towards an international destination
<b>Definition</b>	<p>The number of migrants who died at the external borders of states or in the process of migration towards an international destination, based on the Missing Migrants Project (MMP) data.</p> <p>The MMP data contain information on migrants who died in the course of moving from their country of origin to a destination country. The data include regions of incident, number of deaths, number of people missing, number of people dead or missing segregated by sex, children dead or missing, causes of death, among others. The deaths of migrants who died in the course of international migration, for example border fence falls, transportation accidents, shipwrecks, violent attacks, or due to medical complications during their journeys are also included.</p> <p>The MMP data aims to bear witness to the global phenomenon of migrant deaths, hence informing of safety in international migration, in particular the risk of unsafe, irregular migration. Given that there are few official sources of data on deaths during migration, these data are best understood as a minimum estimate of the true number of migrant deaths worldwide.</p>
