	<b>I n d i c a t o r</b>	<b>12.b.1 Implementation of standard accounting tools to monitor the economic and environmental aspects of tourism sustainability</b>

**I. Global indicator**

&lt;Type 4&gt;

<b>Indicator</b>	Implementation of standard accounting tools to monitor the economic and environmental aspects of tourism sustainability
<b>Definition</b>	<p>The degree of implementation in countries of the Tourism Satellite Account (TSA) and the System of Environmental and Economic Accounts (SEEA) tables that are to date considered most relevant and feasible for monitoring sustainability in tourism.</p> <p>To make up for the limitations of existing statistics, the UNWTO Committee on Statistics proposed to monitor the stage of implementation in countries of the main accounting tools to date for the international monitoring of key sustainability aspects of tourism. This is relevant with the Statistical Framework for Measuring the Sustainability of Tourism (SF-MST) currently under development as requested by the UN Statistical Commission. The SF-MST integrates tourism statistics with other economic, social and environmental information and provides a coherent base for deriving indicators that are relevant for monitoring and analysing the sustainability of tourism.</p>
